

CAT Exhaust Stacks

for the King Air 90 and
200 Series

CAT Exhaust Stacks are designed to increase fuel efficiency, improve cruise and climb performance, reduce nacelle sooting, and virtually eliminate exhaust stack cracking on your King Air 90 or 200.

The attractive, venturi-shaped design of the CAT Stack provides for a harmonically balanced, aerodynamically efficient exhaust gas system which optimizes the performance and functionality of your King Air.

Fuel Efficiency

Throttle back to cruise speed and enjoy the aerodynamic efficiency of CAT Stacks while saving fuel and experiencing lower ITT (internal turbine temperature) readings. Customer experience indicates a savings of up to 20 lbs/hr per engine—a 10% reduced fuel burn during cruise flight.

Increased Performance

The improved aerodynamic efficiency between the propeller and CAT Stacks reduces drag. Operators have reported up to 8 knots improvement at 1700 RPM and 11 knots improvement at 1900 RPM in KA 200s. King Air 90 operators have reported between 4 and 9 knots increase in cruise speed.

A Cleaner Look

Unlike any other exhaust stack available, CAT Stacks will maintain their shine, looking sleek and eye-catching long after other exhaust stacks have discolored.

CAT Stacks lower operating costs through fuel savings and increased performance. This means your stacks can virtually pay for themselves in just two years or less!

Also experience the benefit of clean nacelles and wings. CAT Stacks are designed to direct exhaust away from engine nacelles and wing trailing edges, virtually eliminating sooting and the need for constant aircraft washing.

A durable ceramic coating over state-of-the-art stainless steel alloy means CAT Exhaust Stacks will not discolor, always looking sleek and bright.

Strength and Durability

Exhaust stacks are prone to cracking because of the large temperature differential between cold outside air and the heat of engine exhaust—up to 400 degrees difference. CAT Stacks are streamlined to reduce the surface area of the stack hitting the cold airstream, virtually eliminating cracks. Furthermore, a ceramic coating helps insulate and strengthen the stack for longer life.

- **Enjoy a comprehensive 1 year warranty with the purchase of your Exhaust Stacks**
- **FAA and EASA certified**
