

## CAT Cargo Pod

for the King Air 100, 200, and 300 Series

***Expand carrying capacity, accommodate bulky, oversized luggage, and maximize productivity of your King Air 100, 200, or 300 series aircraft.***

### **Added Storage and Convenience**

Eliminate cabin clutter and easily carry luggage for a planeload of passengers by adding a CAT Cargo Pod. With an unprecedented 60 cubic feet of additional space, the Cargo Pod holds up to 500 lbs more baggage and allows for easy loading and unloading of heavy, cumbersome baggage and oversized items such as golf bags, skis, or specialized equipment. This makes the Pod an ideal solution for commuter, cargo, and corporate operators in need of more capacity.

For added convenience and flexibility, the Cargo Pod can quickly be removed or reinstalled in less than an hour.

### **Performance**

Think that adding a cargo pod to the belly of your aircraft will increase drag? Think again! The Cargo Pod is aerodynamically designed to improve airflow, allowing operators to maintain their original climb and cruise performance within 3-5 knots. In addition, there are no take-off or landing penalties, and the empty pod itself only adds a modest 115 lbs to the aircraft empty weight. Operators have also reported increased aircraft stability.

**The Cargo Pod can provide a great storage solution and a profitable upgrade for corporate, commuter, cargo, or small airline operators!**

*The pod is a roomy 35" wide x 26" tall x 180" long, has a 60" flat base, and is conveniently accessed by two 38" long side-mounted doors.*

### **Safety and Reliability**

With a Kevlar-lined, fiberglass laminate construction, the CAT Cargo Pod is extremely durable. Out of the hundreds of CAT Pods in service, there have been zero failures, no Airworthiness Directives to date, and it has even saved an aircraft from damage during a gear up landing. The Pod is also FAA-certified into known icing conditions, so there are no adverse effects when flying in inclement weather.

- **Raisbeck Dual Aft Body Strakes required for Cargo Pod installation. Call us about adding Strakes if your aircraft is not already equipped!**
- **Optional nose shield available to prevent FOD damage to pod**
- **FAA Certified and EASA Approved**
