

CAT Seating for the King Air 100, 200, and 300 Series

Carry more passengers, decrease aircraft weight, and save valuable cabin space with CAT Seating Solutions.

Choose between an easy switch to lightweight, comfortable seating or the full High Density Interior modification.

Lightweight Seating

Save weight and space by switching to modern, ultra-lightweight, sturdy CAT Seats. Weighing in at a mere 14-17 lbs each, the lightweight seats are designed for comfort and style with memory foam cushions, contoured lumbar supports, armrests, and headrests for ultimate passenger comfort and convenience. Choose from a number of custom seating configurations to maximize the number of passengers and/or extra room in the cabin.

High Density Interior

Designed for commuter, corporate, and small airline operators, the High Density Interior (HDI) modification maximizes the capacity of your King Air. The

Beech executive seats weight approximately 57 pounds each. Gain 400 lbs of useful load or more by switching to CAT Seats.

Enjoy ample room in the cabin while staying comfortable in sturdy, cushioned CAT Seats with lumbar supports, memory foam, headrests, and armrests.

HDI includes a custom seating configuration of up to 13 CAT Seats, easy-clean sidewalls, added carpeting, and oxygen and lighting repositioning.

What better way to expand the usefulness of your King Air and increase revenue than by adding more passengers?

Convenience

Not only are the CAT Seats and High Density Interior modification convenient for operators and passengers, they are also easy to install and remove. The seats easily slide onto the current seating tracks, and installation can be performed in just 60 to 90 days. The CG envelope also remains the same.

- CAT Seats are sold un-upholstered or ready-to-install. Ask about our custom upholstery options.
- Dual aft seats available through special order
- FAA Certified, EASA approved
