CONGRATULATIONS TO  
CAT'S CATHY  
STOCKDALE ON HER  
RECENT WEDDING!**

**Simple Cargo Solution: The CAT Cargo Pod**

*King Airs aren't big enough for overhead storage bins like they have on airliners...*

Fortunately, you can move all that extra luggage underneath the aircraft in a CAT Cargo Pod!

In any given King Air on a trip, the aft compartment is packed full of suitcases, garment bags, and golf bags of all shapes and sizes. Free up precious cabin space, save your back from loading all that luggage up and down stairs, and balance your aircraft's load better by loading your luggage in a CAT Cargo Pod instead of the aft cabin compartment or worse-- on the spare seats.

- ◆ Keep your cabin looking spotless and organized, and save those extra open seats for colleagues, business clients, or family instead of baggage.
- ◆ Spare your pilots', line crew's, and your own back from loading heavy suitcases, golf bags, and other luggage up and down your aircraft's stairs (also saves on stair wear and tear).
- ◆ Means quicker loading and unloading since you are not blocking the stairs with luggage, which

means you can focus more on what's important-- getting you and your passengers where they need to be.

- ◆ Keeps your aircraft balanced by putting most of the weight closer to the aircraft's center of gravity. Your pilots will thank you, and you will be able to carry more luggage.

Don't worry about whether you can fit that extra pair of skis in the aircraft again. Add a CAT Cargo Pod to your King Air today!

**Did you know...**

**... That CAT also has a King Air belly pod designed for Intelligence Surveillance Reconnaissance missions?**

The "CAT Special Missions Pod" houses EO/IR cameras such as the FLIR Star Safire or Wescam MX-15, RADAR equipment, Communications and/or Signals Intelligence sensors, and more. These Pods are on Special Missions King Airs around the world, including CAT's trademark "Stalker" King Air 200 (see side column on page 2), for Maritime and Border Patrol, anti-terrorism and covert operations, forestry service support, and other applications.

## Congratulations to CAT's Cathy Stockdale on her recent marriage!

Congratulations to Cathy Latimer-- oops, we mean Cathy Stockdale-- on her recent marriage! Cathy is a Sales Associate at Commuter Air and helps out with marketing material and computer tech support.

Cathy married Jason Stockdale, a 1<sup>st</sup> Lieutenant in the US Air Force on January 2<sup>nd</sup> this year. Jason is a Communications Officer at Tinker Air Force Base here in Midwest City, and Cathy describes him as "a huge computer geek." The couple met through their local fencing

club (yes, fencing, with the masks, white clothes, and pole-like swords). Both of them fence competitively in different categories at a national level, and both aspire to be internationally-ranked in the upcoming years.

Together, Cathy and Jason love recreational flying (Cathy is a pilot), working out, "tinkering" with computers, laser tag, and video games... Kids these days.

Congratulations, Cathy and Jason, and many more happy years to both of you!

*CAT's Sales Associate Cathy Stockdale (formerly Cathy Latimer) and her new husband, Jason Stockdale, a 1<sup>st</sup> Lieutenant in the US Air Force.*

## CAT STALKER

The CAT Stalker is a highly modified King Air 200, for use in Intelligence, Surveillance, and Reconnaissance Operations, Special Missions Operations, and much more. The third generation Stalker has been released, with new, ruggedized, custom interior; a more capable communications suite than previous models, and WESCAM MX-15HD and Aerocomputer's TM moving map system as standard equipment. Darryl Wilkerson, CAT President and CEO, calls it "our best yet." Call today for more information, or visit our website at [www.commuterair.com](http://www.commuterair.com).
